지능형IoT네트워크 스위치 및 부저

충북대학교 2020. 11. 19.

스위치

□ 스위치 테스트

• SW1.c

```
#include <stdio.h>
      #include <wiringPi.h>
 2
 3
      #define SW1 25
      int main()
    ₽{
 8
          if(wiringPiSetup() == -1) return 1;
          pinMode(SW1, INPUT);
10
11
12
          while(1)
13
14
              printf("%d\n", digitalRead(SW1));
15
16
          return 0;
17
18
```

스위치

□ 스위치와 LED 연동

• SW2.c

```
#include <stdio.h>
 2
      #include <wiringPi.h>
 3
 4
      #define LED1 6
 5
      #define SW1 25
 6
 7
      int main()
 8
9
     ₽{
          if(wiringPiSetup() == -1) return 1;
10
11
          pinMode(LED1, OUTPUT);
12
          pinMode(SW1, INPUT);
13
14
          while(1)
15
16
              if(digitalRead(SW1) ==0)
17
                  digitalWrite(LED1, 0);
18
              else
19
                  digitalWrite(LED1, 1);
20
21
          return 0;
22
```

부저

□ buzzer1.c

```
#include <stdio.h>
#include <wiringPi.h>

const int pinPiezo = 0;

int main(void)
{
    if(wiringPiSetup()==-1) return -1;
    pinMode(pinPiezo, OUTPUT);

    while(1)
    {
        digitalWrite(pinPiezo, 1);
        delay(1);
        digitalWrite(pinPiezo, 0);
        delay(1);
    }
    return 0;
}
```

부저

□ buzzer2.c

```
#include <stdio.h>
      #include <wiringPi.h>
     #include <softTone.h>
      const int pinPiezo = 0;
 4
      const int aMelody[8] = {100,300,600,1000,1500,2000,3000,4000};
      int main(void)
7
    ₽{
          if(wiringPiSetup() == -1) return -1;
8
9
          softToneCreate(pinPiezo);
10
11
          while(1)
12
13
              int i;
              for(i=0;i<8;i++)
14
15
16
                  softToneWrite(pinPiezo, aMelody[i]);
17
                  delay(1000);
18
19
20
              softToneWrite(pinPiezo,0);
21
              delay(1000);
22
23
          return 0;
24
```
